AIM & SCOPE OF THE SEMINAR

Historically coconut and its oil have served man as important foods for centuries. The health and nutritional benefits from coconut oil are unique and compelling. Because of its high lauric, caproic and caprylic acids, coconut oil has antioxidant, antifungal and antibacterial properties. Coconut oil finds extensive use in food, toiletry and industrial sectors because of its unique characteristics. Negative campaign against saturated fats, in general, and tropical oils in particular, has led to a reduction in the consumption of coconut oil over last two decades. This is not a favorable situation for the coconut-growing farmers. New uses, new applications and new products based on coconut oil have to be developed and introduced in the market which in turn will help to boost the consumption of coconut oil and also help farmers. The Coconut Development Board (CDB) is a statutory body established by the Government of India for the integrated development of coconut cultivation and industry in India. CDB has taken several initiatives for the promotion of traditional and virgin coconut oils and their derivatives for value addition. It is the time to refocus coconut oil to help farmers and industrial community related to this sector. The objective of the seminar is to disseminate the knowledge related to the processing and value addition to coconut oil and also focus the scope for newer applications. Eminent speakers from Government Agencies, R&D Organizations and Industries will deliver the lectures.
